Then, thirdly it sends to two editors from the same field and it publishes after receiving the corrected manuscript revised by the author as per the editor’s suggestion/comments. The following norms have been covered under ethical policy of journal:

Guidelines for Reviewers

Please, carefully read the information below, it may help you to review a research paper:-

- **Carefully review the paper**
- Your review should not be about what should have been done; rather it should be a critique of **what the author actually did**.
- If you think paper is poorly written or the contribution is poorly described, **state that, instead of rejecting the paper on this basis, give your comments/ suggestions for modification**.
- Don't review a research paper under the **time pressure**. Spare a little of your **valuable time to review** a paper properly.
- **Review to accept papers**
- When you read a paper, try to **find reasons to accept the paper**, you should spot what is good about the paper and highlight that in your review.
- If you don't like the approaches, fine, but try to decide what about the author's paper makes it acceptable for publication, No doubt, all the papers are not worth publishing, but **almost all papers**

- **have an idea** THAT the author is promoting and **you should review to accept that idea**.
- Sometimes, the idea is bad/wrong/ already been done and so paper can't be accepted. But read the paper looking for **a reason to accept it**.
- When you write your review, write with the mind set **"how to improve this paper"**.
- **Write a Review**
- Review form has option "Yes or No". You should write comments after "yes or no" mark that help the authors to improve his paper. Following should all be covered somewhere in your review:
- Objective of the papers
- Highlight the contribution of the paper as well as how significant it is.
- State your recommendation and why
- State ways to improve the paper
- You should note the small things , but ideally place them at the end of your review in a separate section as "Details to improvement/ General Comments"
- 4. Things to avoid**
- Do not say "The author should add additional references or write on such pattern" **without actually write examples for desired pattern**.
